About the HRC Foundation Health & Aging Program

The Human Rights Campaign Foundation Health & Aging Program (HAP) administers the Healthcare Equality Index and provides other resources to promote the well-being of LGBT people. In addition to the online training provided under the auspices of the HEI, HAP provides in-person LGBT health and aging education to hospitals, clinics, health schools and other organizations throughout the nation. HAP also researches, develops and advocates for LGBT health and aging initiatives at the federal, state and local levels, and provides support to groups and individuals seeking to enhance LGBT wellbeing via education, policy, research and direct services.

Acknowledgments

Deepest thanks to Shane Snowdon, for her skillful leadership of the HEI and the Health & Aging Program 2012-2014.

Many thanks to Marcos Garcia, for his long hours managing the multi-faceted HEI 2014 process; to Tari Hanneman, for leading the HEI 2014 process to completion; to Rachel Percelay and Danielle Stern, HAP interns turned consultants, for their countless contributions to the HEI 2014, from research to survey review; to HAP intern Tamara Imam for survey review and other contributions; and to HAP intern Bonnie Leydig for outreach assistance.

Thanks to Tony Frye for HEI report design, to Janice Hughes and Robert Villaflor for report coordination, and to Beth Sherouse for editing assistance.

Thanks to Gary Gates and the Williams Institute for the provision of data on the top LGBT metro areas which helped shape our research process.

Special thanks to the LGBT patients and HEI 2014 Leaders in LGBT Healthcare Equality who provided material for this report.

Thanks to GLMA: *Health Professionals Advancing LGBT Equality*, an endorsing partner of the Healthcare Equality Index

The HEI was funded in part by generous grants from The Coca-Cola Foundation, Pfizer Inc. and PhRMA.

From the Human Rights Campaign Foundation President

THE HUMAN RIGHTS CAMPAIGN FOUNDATION IS VERY PROUD TO PRESENT THE 2014 HEALTHCARE EQUALITY INDEX (HEI). Since 2007, this national LGBT healthcare benchmarking tool has guided hundreds of healthcare facilities seeking to provide better and more equitable care to their lesbian, gay, bisexual and transgender patients.

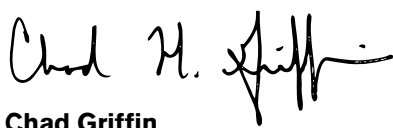

This year, the HRC Foundation for the first time independently assessed hundreds of facilities, in addition to those who voluntarily participated — leading to a record 1,504 healthcare facilities evaluated in this HEI. That's an increase of 109% from 2013. Of those, 427 earned the coveted designation as a “Leader in LGBT Healthcare Equality,” an increase of 101%.

Of the more than 500 healthcare facilities that voluntarily completed the 2014 HEI survey, more than 96% reported fully inclusive LGBT patient and employment non-discrimination and equal visitation policies. These facilities have demonstrated their strong commitment to LGBT patient-centered care. They've sent a forceful message that healthcare facilities are playing an essential role in our nation's movement toward full equality and inclusion for LGBT Americans.

It's not easy to be a HRC-designated Leader in LGBT Healthcare Equality. Policies, employee training and patient care must reflect a commitment to truly comprehensive and fair treatment for LGBT patients. We are delighted to say that **more than 10,000 employees of HEI-participating facilities across the country took part in expert training offered by the HRC Foundation staff**, resulting in an enormous increase in LGBT knowledge among both senior administrators and front-line staff in hospitals around the country.

But it's not all good news. In our research, which we view as the same type of investigation an LGBT patient might undertake, we looked at the policies of the largest hospitals in all 50 states, as well as in 50 metro areas nationwide with the highest LGBT populations. We found evidence that many hospitals still have a long way to go toward true inclusion — despite the fact that many LGBT-inclusive policies are now required for accreditation and mandated by federal regulation. We hope this report will play an essential role in motivating leaders of these facilities to do right by their LGBT patients.

We commend the leadership of each and every healthcare facility for actively taking steps to enhance the care they provide to LGBT patients and their families. We celebrate this year's 427 Leaders in LGBT Healthcare Equality. Most of all, we invite all healthcare facilities to follow our Leaders' lead in committing to provide equitable and inclusive healthcare for LGBT Americans.

Chad Griffin

HRC Foundation President

Why the HEI?

56%

of LGB patients surveyed have experienced some type of discrimination in healthcare

70%

of transgender or gender non-conforming patients surveyed have experienced some type of discrimination in healthcare

THE HUMAN RIGHTS CAMPAIGN

FOUNDATION developed the Healthcare Equality Index to meet a deep and urgent need on the part of lesbian, gay, bisexual and transgender Americans: the need for equitable, knowledgeable, sensitive and welcoming healthcare, free from discrimination. No one facing health concerns should also have to worry about receiving inequitable or substandard care because of their LGBT status.

Yet it is clear that many LGBT Americans have exactly these concerns when seeking healthcare, which intensify whatever worries they may have about their health. In Lambda Legal's landmark study *When Health Care Isn't Caring*, 73% of transgender respondents and 29% of lesbian, gay and bisexual respondents reported that they believed they would be treated differently by medical personnel because of their LGBT status.* Equally disturbing, 52% of transgender respondents and 9% of lesbian, gay and bisexual respondents reported that they believed they would actually be refused medical services because of their LGBT status.

When asked why they had such concerns, more than half of all

respondents reported that they had experienced at least one of the following types of discrimination in healthcare: being refused needed care, healthcare providers refusing to touch them or using excessive precautions, healthcare providers using harsh or abusive language, being blamed for their health status, or healthcare providers being physically rough or abusive. 70% of transgender and gender-nonconforming respondents and almost 56% of lesbian, gay or bisexual respondents had at least one of these experiences.

The HEI exists because the HRC Foundation believes that the majority of American healthcare facilities do not want LGBT individuals in their communities to have – or worry about having – these kinds of experiences. But facilities are often unsure how to protect their LGBT patients from discrimination, provide them with optimal care and extend a warm welcome to allay their concerns.

The HEI was developed to give these healthcare facilities the information and resources they need to ensure that LGBT people have access to truly patient-centered care. The HEI also uses this report to applaud

* *When Health Care Isn't Caring: Lambda Legal's Survey of Discrimination Against LGBT People and People with HIV*. New York: Lambda Legal, 2010. Available at: <http://www.lambdalegal.org/publications/when-health-care-isnt-caring>

Why the HEI? To prevent patient experiences like these...

“I couldn’t believe it – as I walked back to see my partner and our newborn, an employee stopped me and asked who I was. When I said ‘the other mom,’ she rolled her eyes and walked away saying, ‘I don’t believe this.’”

- A lesbian mother after the birth of her first child

“When I walked toward the women’s bathroom in the waiting area, the receptionist jumped up and told me to use a McDonald’s restroom down the street. I felt like leaving and never going back.”

- A transgender woman waiting for her first physical in years

“After I mentioned that my husband would be visiting me, the staff, who had been very friendly, turned very cool – and I saw a lot less of them, even when I really needed help.”

- A gay man hospitalized for a lung condition

“When I arrived in the emergency room, I ran to the front desk and told them I was there to see my son. ‘He’s already in there with his father,’ the attendant said. When I replied, ‘Yes, I’m, his other father – he has two dads,’ you could have heard a pin drop. My partner and I were watched by two hospital staff as if we were criminals. I have never felt so humiliated in my life.”

- A gay father whose son was having trouble breathing

“I transitioned ten years ago and have a full beard. But after learning I was born female, the doc kept calling me ‘she’ in front of all the staff and other patients, no matter how many times I corrected him – and kept asking when I’d be having ‘the surgery.’”

- A transgender man seeking care for a dislocated shoulder

Why Healthcare Organizations Participate in the HEI

- ✓ **Ensure compliance with legal, CMS and The Joint Commission requirements**
- ✓ **Reduce risk of litigation, complaints and negative publicity**
- ✓ **Improve quality and safety**
- ✓ **Enhance patient satisfaction ratings**
- ✓ **Provide patient-centered care to a long-overlooked group**
- ✓ **Receive free staff training from an expert source**
- ✓ **Reach out to a highly loyal market segment**
- ✓ **Enjoy recognition for commitment to equity, inclusion and diversity**

the facilities that have shown their commitment to LGBT patient-centered care by taking the HEI survey and awards those facilities that meet the HEI's Core Four criteria the coveted status of "Leader in LGBT Healthcare Equality."

In the last few years, the HEI has been made even more relevant and helpful by The Joint Commission standard (surveyed from July 1, 2011) that Commission-accredited facilities must prohibit discrimination based on "sexual orientation" and "gender identity," thus extending vital protection to LGBT patients.** Furthermore, both The Joint Commission and the federal Centers for Medicare and Medicaid Services now require that facilities allow visitation without regard to sexual orientation or gender identity – another giant step toward LGBT equity in healthcare.***

The HEI offers healthcare facilities a powerful way to affirm that they comply with these requirements and are committed to LGBT patient-centered care. The HEI also urges facilities to extend non-discrimination protections to their LGBT employees, who play a key role in ensuring sensitive, knowledgeable LGBT care.

Equally important, the HEI offers all participating facilities expert training

in LGBT health needs, recognizing that staff education is critical to the success of any policy. Facilities may enroll as many staff as they would like in free online training that has been widely hailed as groundbreaking and invaluable.

In short, the HEI offers healthcare facilities unique and powerful resources for providing a long-overlooked group of patients the care that everyone deserves – while also complying with new regulatory requirements and gaining access to high-quality staff training.

If you are affiliated with an HEI-participating facility, our deepest thanks for your commitment to LGBT patient-centered care. And if you are affiliated with, or know of, healthcare facilities not yet engaged with the HEI, we hope you will bring this report to their attention. We are confident that they will thank you for informing them about this vital resource for ensuring high-quality healthcare for LGBT Americans!

** See RI.01.01.01 EP 29, *Comprehensive Accreditation Manual for Hospitals*, Update 1, January 2011 and *Comprehensive Accreditation Manual for Critical Access Hospitals*, Update 1, January 2011.

***See RI.01.01.01 EP 28, Joint Commission manuals referenced above and *Code of Federal Regulations* 42 C.F.R. § 482.13(h) (for hospitals) and 42 C.F.R. § 485.635(f) (for critical access hospitals).

Why the HEI? To help LGBT patients find LGBT friendly healthcare facilities

In addition to being a valuable tool and resource for healthcare facilities, the HEI is used by LGBT patients and their loved ones to find healthcare facilities that provide equitable and inclusive care. The ratings for each facility that are included in this report are also available on the HRC website. The HEI webpage received over 100,000 hits over the past year from people looking for information about the HEI and LGBT inclusive healthcare facilities. The HEI website has provided invaluable information to patients like **K. Fields**.

As a trans-masculine person with uterine fibroids, periods can be not only excruciatingly painful, but trigger significant dysphoria as well. In June, the pain was so severe that I nearly passed out. My partner searched frantically for a trans-friendly gynecologist in the DC Metropolitan area to see me to no avail. She then began looking up hospitals on HRC's Healthcare Equality Index where she found that Christiana Hospital in Newark, Delaware was a Leader in LGBT Healthcare Equality. Even though there was another hospital closer to us, we decided to make the 30 minute drive to Christiana.

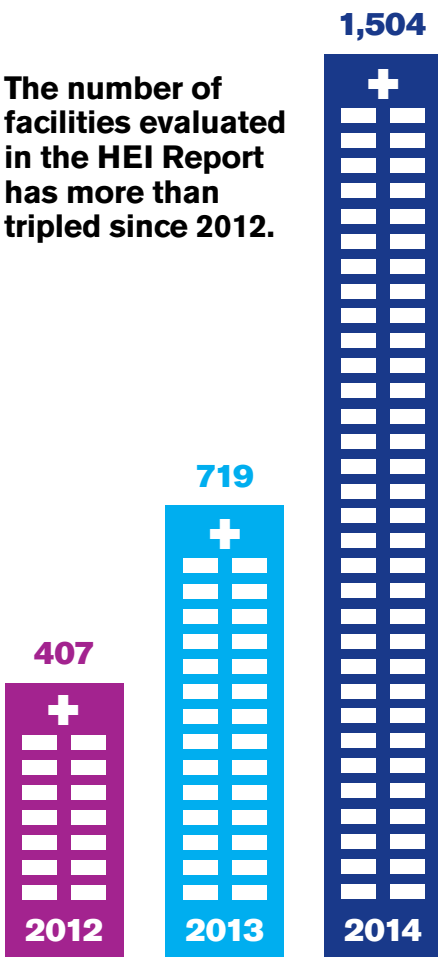

I went to the Ob/Gyn Triage Unit at Christiana. I am always frightened of entering spaces that are designated exclusively for women as I feel out of place and on guard against misgendering, but in this case I just wanted the pain to stop. As wary as I was going in, my experience at Christiana Hospital was excellent. The staff, nurses and doctor all used my preferred name and pronouns and spoke about my condition in terms of physiology (people with uteri) instead of assumptions about gender (assuming everyone with a uterus is a woman).

I feel incredibly fortunate that I was able to get the care and information I needed without being mis-gendered or microaggressed so I could focus on getting better.

Executive Summary

The number of facilities evaluated in the HEI Report has more than tripled since 2012.

2014 WAS ANOTHER TREMENDOUSLY successful year for HRC's Healthcare Equality Index (HEI), the unique annual survey that began transforming care for LGBT people in the nation's healthcare facilities in 2007. HEI participation continued to grow with 507 healthcare facilities actively participating in the HEI 2014 survey, compared to 289 in 2013 and 122 in 2012. With LGBT equality gains appearing more frequently in the news, U.S. healthcare facilities showed stronger interest than ever before in LGBT patient-centered care, responding enthusiastically as they learned about the HEI via conferences, media coverage, email invitations and word of mouth.

These striking gains in HEI participation were matched by increases in the number of facilities meeting the HEI's Core Four Leader Criteria. These criteria represent four foundational elements of LGBT patient-centered care: an LGBT-inclusive patient non-discrimination policy, an LGBT-inclusive visitation policy, an LGBT-inclusive employment non-discrimination policy and staff training in LGBT patient-centered care. Record numbers of facilities throughout the country documented that they met the HEI's Core Four criteria for LGBT equity and inclusion this year and an unprecedented 84% achieved the coveted status of "Leader in LGBT

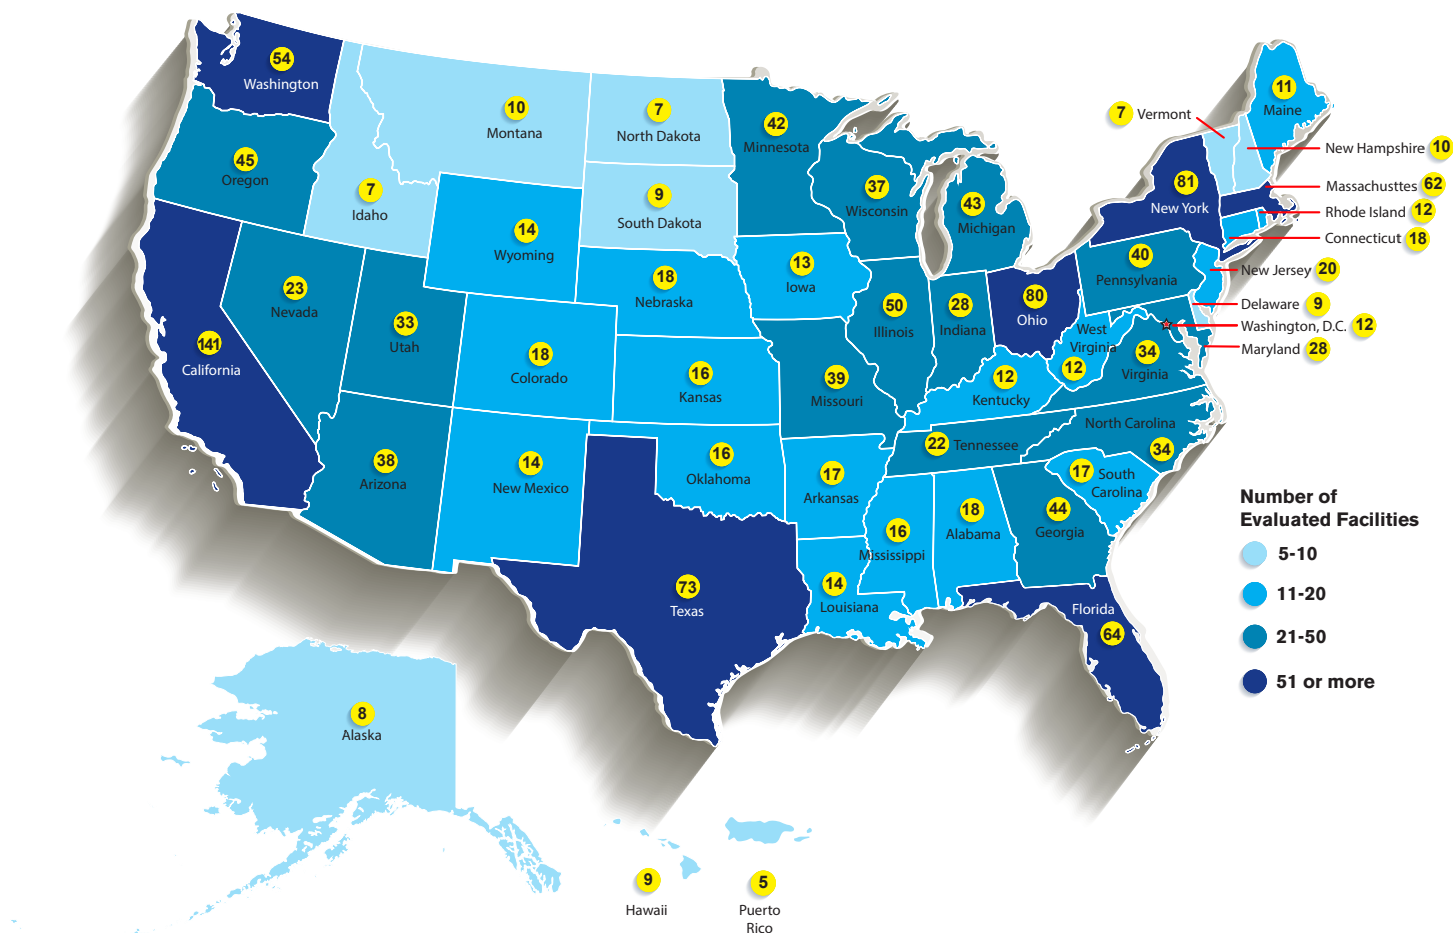

Healthcare Equality" by meeting all of the Core Four requirements. **This year's 427 Equality Leaders represent a 101% increase in the number of Leaders from last year** (212 respondents were leaders in 2013). Over one third of this year's Leaders (143) achieved the status of Leader in LGBT Healthcare Equality for the first time in 2014.

In addition to the active participants, this year's HEI includes ratings from 640 "non-respondent" hospitals that the HRC Foundation researched to ascertain their existing policies. An additional 357 facilities that participated in the HEI survey in 2012 or 2013 are also listed. Combined, the total number of healthcare facilities rated in the 2014 HEI surged to 1,504, a 109% increase over the 719 facilities included in the 2013 report.

As a result of this proactive research, the 2014 HEI includes many more facilities rated in each state. For the first time there are at least seven facilities rated in every state, with the overwhelming majority of states having ten or more facilities rated. There is still significant work to be done, however, to increase the geographical diversity of the facilities that actively participate in the survey, as a majority of states had five or fewer actively participating facilities.

Number of Evaluated Facilities by State

This year's HEI report includes a record number of facilities that have been evaluated on at least three of the Core Four leader criteria. In addition to the HEI 2014 survey participants, we researched the largest facilities in each state, the District of Columbia and Puerto Rico as well as in the top 50 LGBT metro areas to ensure strong representation from each state (see page 48 for more information about this process). A complete list of HEI 2014 evaluated facilities by state is available in the Appendix starting on page 50. On our website (hrc.org/hei) you will find an interactive map with all 1,504 evaluated facilities.

In addition to the significant growth in the HEI, this year also finds continued improvements in the number of actively participating facilities that are adopting key policies to protect their LGBT patients, visitors and employees. The percentage of active survey participants that have adopted fully LGBT-inclusive patient and employment non-discrimination policies — which include both sexual orientation and gender identity — as well as equal visitation policies have reached nearly perfect levels with 96% or greater adoption of each of these key policies.

Unfortunately, the near perfect performance of the active participants stands in stark contrast to the percentage of non-respondent hospitals that were found to have these policies. Among the non-respondent hospitals for which we were able to find or obtain enumerated patient non-discrimination policies, only 51% had policies that included both “sexual orientation” and “gender identity.” A similar number were found to have an LGBT-inclusive employment non-discrimination policy, with 50% of non-respondents having an enumerated policy including both “sexual orientation”

and “gender identity.” A greater portion of researched facilities for which we were able to obtain visitation policies had an equal visitation policy, with 84% of the non-respondent hospitals found to have a visitation policy welcoming to all friends and family.

Among the non-respondent facilities that had enumerated patient and employment non-discrimination policies, there were significant gaps between the percentage of facilities whose policies included only sexual orientation and those that also included

HEI Survey Respondents See Continued Growth in Adoption of Core Four Policies

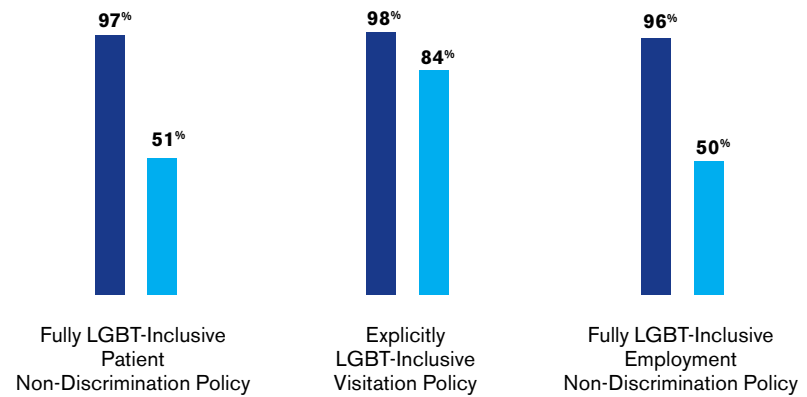

2012 ■
 2013 ■
 2014 ■

Non-Respondent Hospitals Don't Appear to be Adopting the Core Four Policies at the Same Level

2014 HEI Survey Participants

2014 HEI Non-Respondent Hospitals

gender identity. These gaps must be closed as transgender and gender non-conforming individuals are much more likely to face discrimination in both healthcare and employment. **It is imperative nondiscrimination policies include protections for gender identity as well as sexual orientation** – and that both forms of discrimination be explicitly rejected by all U.S. healthcare facilities.

HEI 2014 participants also showed greater interest in the fourth of the Core Four criteria – staff training in LGBT patient-centered care. 86% of HEI 2014 participants met the training criterion this year, an increase from 80% of participants in 2013. The overwhelming majority of these facilities chose to take advantage of one or more of the three free expert training webinars provided as part of the HEI. **HEI staff trained over 10,000 healthcare personnel**

nationwide this year – a sweeping educational initiative that garnered wide praise.

As the increase in Equality Leaders indicates, facilities are engaging with the HEI more intensively each year, seeking to learn about LGBT patient-centered care in greater depth. To meet and encourage this growing interest, the HEI 2014 asked participants not only about the Core Four criteria but also about 31 other best policies and practices in LGBT care. These questions, known collectively as the Additional Best Practices Checklist, invited facilities to gauge their level of engagement and interest vis-à-vis a host of expert recommendations for optimal care. We were extremely pleased this year to see some substantial increases in the number of facilities adopting many of these best practices.

As this overview of the HEI 2014 indicates, diverse healthcare facilities in all 50 states are making tremendous strides toward LGBT patient-centered care; in unprecedented numbers, they are changing key policies and training their staffs. We heartily applaud the facilities that have taken these critical first steps and we encourage them to deepen their commitment to LGBT patient-centered care by continuing to adopt the best practices described in the Additional Best Practices Checklist. We also encourage healthcare facilities that have yet to participate in the HEI to use this unique and invaluable resource to enhance LGBT care and signal their commitment to LGBT equity and inclusion. The HRC Foundation looks forward to welcoming them to the HEI in future years – and helping them extend a warm welcome to LGBT Americans.

The HEI 2014 Core Four Leader Criteria

THE HEALTHCARE EQUALITY INDEX 2014 ASKED 41 QUESTIONS about best practices in LGBT patient-centered care. Ten of these questions constituted the Core Four Leader Criteria listed below, encompassing the policies and practices considered foundational for equitable and inclusive LGBT care. The first two of the Core Four criteria call for policies ensuring that LGBT patients and their families are welcomed and provided with care free of discrimination. The third criterion calls for a LGBT-inclusive employee non-discrimination policy. The fourth criterion calls for the staff training necessary to bring these policies to life and ensure their compliance.

HEI 2014 survey participants that met all of the Core Four criteria were awarded “Leader in LGBT Healthcare Equality” status (for a list of 2014 Equality Leaders, see page 16). To receive credit for a “yes” response to any of the Core Four questions, HEI survey participants were required to provide written documentation of their compliance, which was carefully reviewed by HRC staff. To receive credit for a “yes” response to the first three Core Four criteria, the non-respondents either had to have their policies clearly stated on their website or they had to submit their policies to us for review. For more information about the Core Four criteria: www.hrc.org/hei/the-core-four

1

Patient Non-Discrimination Policies

- 1a** Patient non-discrimination policy (or patients' bill of rights) is fully LGBT inclusive by including both the terms “sexual orientation” and “gender identity”
- 1b** Patient non-discrimination policy is communicated to patients in at least two readily accessible ways

2

Visitation Policies

- 2a** Visitation policy explicitly grants equal visitation to LGBT patients and their visitors
- 2b** Equal visitation policy is communicated to patients and visitors in at least two readily accessible ways

3

Employment Non-Discrimination Policies

- 3a** Employment non-discrimination policy (or equal employment opportunity policy) is fully LGBT inclusive by including both the terms “sexual orientation” and “gender identity”

4

Training in LGBT Patient-Centered Care

- 4** HEI-approved training in LGBT patient-centered care was provided to key staff members in 2014

1

Patient Non-Discrimination Policies

Percentage of facilities that have a fully inclusive LGBT Patient Non-Discrimination Policy

97%
of 2014 HEI
survey respondents

51%
of 2014 HEI
non-respondents

LESBIAN, GAY, BISEXUAL AND TRANSGENDER PEOPLE continue to face discrimination in healthcare because of their sexual orientation and/or gender identity. The first of the HEI Core Four criteria calls for a patient non-discrimination policy (or patients' bill of rights) that includes both "sexual orientation" and "gender identity."

97% of HEI 2014 survey participants (494 of 507 respondents) documented that they include both "sexual orientation" and "gender identity" in their patient non-discrimination policy. This represents an increase from 87% of HEI 2013 survey participants. Notable this year is the fact that among survey participants there was no difference in the percentage of respondents that included "sexual orientation" and those that included "gender identity" in their policies, indicating that more hospitals are adopting the fully LGBT-inclusive patient non-discrimination protections required by The Joint Commission.

Unfortunately, we were unable to find the patient non-discrimination policies for all of the non-respondent hospitals, as many facilities choose not to include their patients' bill of rights on their hospital website and they did not respond to invitations to submit their policies to us. Of the 640 non-respondent hospitals, we found or obtained the patient non-discrimination policies for 501 hospitals. For these hospitals, only 257 of the hospitals or **51%** were found to have a patient non-discrimination policy that included both the terms "sexual orientation" and "gender identity."

Among the non-respondent hospitals, we continue to see the trend of "gender identity" being much less frequently protected than "sexual orientation." Among the non-respondent hospitals, 72% of the patient non-discrimination policies contained the term "sexual orientation" but only 52% contained the term "gender identity." This gap must be closed. In a comprehensive national survey of transgender Americans, 19% of respondents reported being refused care because of their transgender status, 25% reported being

harassed or disrespected in medical settings and 25% reported delaying needed care because of concern about discrimination from medical providers.*

A patient non-discrimination policy is only effective, of course, if patients and staff know about it. Therefore, the HEI requires survey participants to document not only that they have an LGBT-inclusive non-discrimination policy but also that they make it readily accessible to patients.

To achieve full credit for this Core Four criterion, a non-discrimination policy must be explicitly LGBT-inclusive and must be made available to patients in at least two of the following ways:

- Posted on facility website
- In materials given to patients at admitting/ registration
- In materials given to patients at other time(s)
- In materials available for take-away in patient waiting areas
- Posted in patient waiting area(s)

98% of these respondents documented that their non-discrimination policy was readily accessible and communicated to patients in at least two ways. The largest number (88%) made their non-discrimination policy available via their website, with most also disseminating it via materials given to patients or posted in patient waiting areas.

For more information about this Core Four criterion:

hrc.org/patient-non-discrimination

In 2011, The Joint Commission issued a standard that requires hospitals to prohibit discrimination based on sexual orientation and gender identity. Learn more at www.jointcommission.org/lgbt

2

Equal Visitation Policies

Percentage of facilities that have an equal visitation policy

of 2014 HEI survey respondents

of 2014 HEI non-respondents

THE SECOND OF THE HEI CORE FOUR CRITERIA focuses on the unique challenges faced by LGBT people in visitation. Across the U.S., same-sex couples, same-sex parents and other LGBT people fear that they could be prevented from visiting their loved ones in healthcare settings because their state does not legally recognize same-sex relationships and/or because of bias or discomfort on the part of employees.

In 2010, after learning of a tragic incident in which a lesbian was denied visitation to her dying partner, President Barack Obama directed the U.S. Secretary of Health and Human Services to develop regulations protecting the visitation rights of all patients. These regulations are now in effect at all hospitals that accept Medicare or Medicaid payments, which is the vast majority of facilities.

98% of the HEI 2014 survey respondents for which this question was applicable (450 of 458 respondents, since some respondents are outpatient facilities only) documented that they have explicitly LGBT-inclusive visitation policies. This total represents a continued and welcome increase over past years: only 53% of respondents offered equal visitation in 2011, 75% offered it in 2012 and 90% offered it in 2013.

Unfortunately, we were unable to find equal visitation policies for all of the non-respondent hospitals, as many facilities choose not to include any information about who can visit patients on their hospital website and they did not respond to invitations to submit their policies to us. Of the 640 non-respondent hospitals, we found or obtained the visitation policies for 494 hospitals. For these hospitals, 414 of the hospitals or **84%** were found to have an equal visitation policy. For the purposes of our research we were very liberal in what we counted as an equal visitation policy. We did not

require that a hospital post on its website that a patient has the right to designate the visitors of their choice or that visitation would not be limited based on sexual orientation or gender identity. Instead we looked for language that was welcoming to all friends and family and that did not conflict with a patient's right to choose visitors. If we had required hospitals to explicitly state that patients had a right to the visitors of their choice, the percentage of hospitals in compliance would be significantly lower.

To achieve full credit for this Core Four criterion, HEI participants must document not only that their visitation policy explicitly provides equal visitation to LGBT patients and their visitors but also that it is readily accessible to them in at least two of the following ways:

- Posted on facility website
- In materials given to patients at admitting/ registration
- In materials given to patients at other time(s)
- In materials available for take-away in patient waiting areas
- Posted in patient waiting area(s)

89% of respondents documented that their visitation policy was readily accessible to patients and visitors and communicated to patients in at least two ways. The largest number (83%) made their visitation policy available via their website, with most also disseminating it via materials given to entering patients or posted in patient waiting areas.

For more information about this Core Four criterion: hrc.org/visitation

Since 2011, the Conditions of Participation of the federal Centers for Medicare and Medicaid Services (CMS) have required hospitals to permit patients to designate visitors of their choosing and to prohibit discrimination in visitation based on sexual orientation and gender identity. As an organization with CMS-deeming authority, The Joint Commission aligned its hospital standards with the CMS requirements.

A joint HRC/America Health Lawyers Association publication provides more information: hrc.org/revisiting-visitation

3

Employment Non-Discrimination Policies

of 2014 HEI
survey respondents

of 2014 HEI
non-respondents

THE THIRD OF THE HEI CORE FOUR CRITERIA calls for an employment non-discrimination policy (or an equal employment opportunity policy) that includes both “sexual orientation” and “gender identity.” Such a policy typically covers all conditions of employment, including hiring, promotion, termination and compensation.

Federal law does not yet protect employees from discrimination based on actual or perceived sexual orientation or gender identity. Furthermore, only a minority of states have passed laws prohibiting discrimination on the basis of sexual orientation (22 states and the District of Columbia) or gender identity (19 states and the District of Columbia). This Core Four criterion calls on healthcare facilities to protect their LGBT employees from discrimination regardless of state non-discrimination laws. LGBT staff members not only deserve a discrimination-free workplace but they also informally educate co-workers, provide valuable guidance to facility leadership and serve as ambassadors to LGBT communities.

96% of HEI 2014 survey participants (487 of 507 respondents) documented that they include both “sexual orientation” and “gender identity” in their employment non-discrimination policy. This represents an increase from 85% of HEI 2013 survey participants. Notable this year is the fact that among survey participants the difference between those that provided protections for “sexual orientation” and “gender identity,” narrowed significantly. This year, 99% of HEI survey participants had policies that included “sexual orientation” and 96% had policies that also included “gender identity.”

Unfortunately, we were unable to find employment non-discrimination policies for all of the non-respondent hospitals, as many facilities choose not to include an employment non-discrimination statement on their hospital website and they did not respond to invitations to submit their policies to us. Of the 640 non-respondent hospitals, we found or obtained the employment non-discrimination policies for 421 hospitals. For these hospitals, only 209 of the hospitals or **50%** were found to have an employment non-discrimination policy that included both the terms “sexual orientation” and “gender identity.”

Among the non-respondent hospitals, we continue to see the trend of “gender identity” being much less frequently protected than “sexual orientation.” Among these hospitals, 74% of the employment non-discrimination policies contained the term “sexual orientation” but only 50% contained the term “gender identity.”

Among the non-respondent hospitals, there is a significant 25-point gap between those that included protection for “sexual orientation” and those who also included “gender identity” in their policies. This gap is unacceptable and must be closed. In the national survey of transgender Americans cited earlier, 26% reported that they had lost a job due to being transgender or gender-non-conforming and 50% had been harassed on the job.*

The 24-point gap between workplace protection for “sexual orientation” and for “gender identity” found among non-respondent hospitals must be closed. 26% of transgender Americans report that they have lost a job due to being transgender or gender-non-conforming and 50% report being harassed on the job.

* Grant, Jaime M., Lisa A. Mottet, Justin Tanis, Jack Harrison, Jody L. Herman and Mara Keisling. *Injustice at Every Turn: A Report of the National Transgender Discrimination Survey*. Washington: National Center for Transgender Equality and National Gay and Lesbian Task Force, 2011.

HRC’s Corporate Equality Index (CEI) evaluates LGBT inclusion at the nation’s largest employers. For more information about this unique and comprehensive resource for LGBT workplace equity, visit hrc.org/cei

Training in LGBT Patient-Centered Care

of 2014 HEI survey respondents

Over 10,000 hospital and clinic staff trained through free HEI webinars

THE FOURTH OF THE HEI CORE FOUR CRITERIA calls for key facility employees to receive expert training in LGBT patient-centered care. This criterion recognizes the fact that training is critical for policies to be successful and for truly LGBT-welcoming care to occur.

To meet this criterion, facilities participating in the HEI for the first time in 2014 were required to document that they had registered at least one executive level staff member in each of five designated work areas for at least 90 minutes of training from a proven expert in LGBT health. The five work areas were: facility leadership, nursing management, patient relations/services management, admitting/registration management and human resources management. Returning HEI participants were required to document that they had registered at least ten additional employees for training in LGBT-centered care; most of them registered many more staff than required.

To assist facilities in meeting this HEI criterion and to ensure high-quality training, the HEI offered three free webinars in LGBT patient-centered care to all HEI participants, free of charge: a 90-minute “Executive Briefing,” a 60-minute “Introduction to LGBT Patients,” and a 60-minute presentation on “Best Organizational Practices for Transgender Patients.” These acclaimed webinars enabled the HEI to train over 10,000 hospital and clinic staff nationwide in 2014.

86% of HEI 2014 respondents documented that they had provided employee training in LGBT patient-centered care. This represents an increase over the HEI 2013, when 80% of facilities trained their staff to meet this criterion.

“I wanted to let you know that this was probably the most informative and interesting Webinar that I have ever attended. I was so intent on the subject matter that I failed to realize there were tornado warnings and a ‘code gray’ on my hospital unit! Thank you so much for presenting this important topic! I would recommend this webinar to all healthcare providers.”

HEI 2014 Leaders in LGBT Healthcare Equality

This year, **427 of the 507 HEI 2014 survey respondents (84%) met all of the Core Four criteria for LGBT patient-centered care**, earning the coveted status of “2014 Leader in LGBT Healthcare Equality.” This represents a 101% increase in the number of leaders (212 respondents were leaders in 2013).

Featured in this list are the 427 HEI 2014 Equality Leaders. In addition to being celebrated in the HEI report, Equality Leaders receive a special logo and a toolkit of resources for outreach to LGBT residents in their service area.

Every state except Idaho and North Dakota has at least one Equality Leader.

Additional Best Practices Checklist

IN ADDITION TO THE 10 QUESTIONS CONSTITUTING THE CORE Four Leader Criteria, the Healthcare Equality Index 2014 asked participants 31 other questions about best practices in LGBT patient-centered care. These questions constituted the Additional Best Practices Checklist, a unique and comprehensive tool for respondents to use in needs assessment and strategic planning.

Responses to the Checklist questions do not determine Leader status and are not reported by name. But documentation is requested for all “yes” responses and they are reported in aggregate, to facilitate benchmarking and indicate national trends and interests. In addition, all HEI 2014 respondents receive a customized document showing their current and aspirational practices, as indicated in the Checklist, and are provided resources to help them implement these best practices.

The Checklist asked HEI participants about their current and planned non-clinical practices in these areas:

- ✓ **LGBT Patient Services & Support**
- ✓ **Transgender Patient Services & Support**
- ✓ **Patient Self-Identification**
- ✓ **Medical Decision-Making**
- ✓ **Employment Benefits & Policies**
- ✓ **Community Engagement**

We were extremely pleased this year to see substantial increases in the number of facilities adopting and implementing many of these best practices. In the area of LGBT Patient Services and Support we saw double digit increases in the percentage of hospitals that provide LGBT specific information on their website or in brochures and LGBT related training in addition to the training provided by the HEI. We also found that 58% of hospitals provided transgender-focused training to employees this year, up from 42% last year. In the area of Patient Self-Identification, there were double digit increases in hospitals that record state registered domestic partnerships and diverse sets of parents, and more hospitals are providing employees with training explicitly reminding them that LGBT status is confidential patient information.

In the Employment Benefits and Policies section we saw some significant and very encouraging increases as well. The percentage of hospitals that provide healthcare benefits to same sex partners increased from 55% last year to 82% of this year’s participants. Up from 6% last year, 20% of this year’s participants have at least one health insurance plan that explicitly covers medically necessary healthcare services for transgender people, including gender transition related treatment.

We heartily applaud the facilities that have taken these critical first steps, and we encourage them to deepen their commitment to LGBT patient-centered care by continuing to adopt the best practices described in the HEI 2014 Checklist.

LGBT Patient Services and Support

THE HEI 2014 ADDITIONAL BEST PRACTICES CHECKLIST asked first about key best practices in support of LGBT patients as a group. HEI participants' responses are reported in aggregate below.

✓ Does your organization provide information about LGBT services and/or health concerns on its public website?

- 34% Yes
- 51% No, but we are interested in this
- 15% No

✓ Does your organization publish a brochure or other print material designed to educate or support LGBT patients?

- 30% Yes
- 56% No, but we are interested in this
- 14% No

✓ Does your organization regularly make LGBT-health related material published by other organizations available to patients?

- 34% Yes
- 48% No, but we are interested in this
- 18% No

✓ Does your organization have an LGBT-focused office, point-person, advisory group or equivalent?

- 59% Yes
- 26% No, but we are interested in this
- 15% No

✓ If your organization regularly surveys patients about the care they have received (e.g., via a patient satisfaction survey), does the survey explicitly allow patients to identify as LGBT, if they wish?

- 11% Yes
- 54% No, but we are interested in this
- 35% No

✓ If your organization regularly surveys patients about the care they have received (e.g., via a patient satisfaction survey), does the survey explicitly collect LGBT-related information (e.g., whether needs were met related to LGBT status)?

- 6% Yes
- 55% No, but we are interested in this
- 36% No
- 3% No data available

✓ Since July 1, 2013, has your organization offered staff LGBT-related training in addition to training required by the HEI?

- 61% Yes
- 23% No, but we are interested in this
- 16% No

✓ Does your organization help make LGBT-knowledgeable and -friendly providers known as such to interested patients?

- 39% Yes
- 43% No, but we are interested in this
- 18% No

49% of respondents who make providers known indicated that they do so via a list for internal use, 36% list these providers in the GLMA Provider Directory (at www.glma.org). 34% do so via "tags" in an online "find a provider" system.

✓ Has your organization reviewed any of its clinical services to identify possible LGBT-related gaps?

- 30% Yes
- 53% No, but we are interested in this
- 17% No

Beth Israel
Medical Center

LGBT HEALTH SERVICES

A PROGRAM OF
BETH ISRAEL MEDICAL CENTER

*Addressing the Special Needs of the Lesbian,
Gay, Bisexual and Transgender (LGBT) Community*

“At Mount Sinai we are working to ensure LGBT culturally and clinically competent healthcare throughout our system, which we hope will serve as a model for other mainstream healthcare systems, so that whenever and wherever an LGBT patient seeks healthcare to meet their needs, they will be able to find it.”

Barbara E. Warren, Psy.D.

Director, LGBT Programs and Policies
Office of Diversity and Inclusion
Mount Sinai Health System

Mount Sinai Beth Israel's LGBT Health Services program is committed to meeting the special healthcare needs of the LGBT community with respect and compassion. The program implements a number of best practices in LGBT patient services and support. One best practice is the provision of information, referral and patient navigation for LGBT patients and consumers. They also provide professional education and training for providers in LGBT healthcare topics and trained over 1,000 employees, residents and fellows in the past year in LGBT specific cultural and clinical competency.

Transgender Patient Services and Support

TRANSGENDER PATIENTS ARE PARTICULARLY VULNERABLE IN HEALTHCARE. They can face long waits for care, pointing and laughter, negative comments, violations of confidentiality, inappropriate questions and examinations, denial of (or challenges to) bathroom use and room assignments that reflect the sex assigned to them at birth rather than their actual gender identity. Given these and many other challenges, the HEI 2014 offered participants a dedicated hour-long webinar on transgender patients' needs, highlighted these needs in the two other HEI training webinars and asked specifically about practices in support of transgender patients in the Additional Best Practices Checklist.

HEI 2014 participants' responses to the Checklist questions are reported in aggregate below.

✓ **Since July 1, 2013, has your organization provided transgender-focused training to employees?**

58% Yes
29% No, but we are interested in this
13% No

✓ **Has your organization trained and clearly designated at least one employee at an appropriate level of skill, knowledge and influence to serve as an adviser/navigator for transgender patients and/or to coordinate a peer accompaniment program for transgender patients?**

36% Yes
46% No, but we are interested in this
18% No

✓ **Has your organization re-signed one or more single-stall bathrooms previously signed as only for men or only for women as unisex bathrooms, to assist transgender patients, patients accompanied by a different-sex child or attendant and others?**

65% Yes
21% No, but we are interested in this
14% No

For more information about best practices for care of transgender patients see the publication, *Creating Equal Access to Quality Health Care for Transgender Patients: Transgender-Affirming Hospital Policies*, from HRC Foundation, Lambda Legal and the LGBT Rights Committee of the New York City Bar Association

**This publication is available for download at:
hrc.org/transgender-affirming-hospital-policies**

“Helping a transgender Veteran transition comes with tremendous professional satisfaction. These soldiers live and serve our country misaligned with who they are and it is wonderful to witness the correction. To assist them on this journey is the epitome of the patient provider relationship.”

Sonia Perez-Padilla, MD

Lead, Tucson Regional Transgender Team
Southern Arizona Veterans Affairs
Health Care System

Southern Arizona Veterans Affairs Health Care System (SAVAHCS) has an exceptionally strong interdisciplinary regional transgender team to support transgender veterans in all aspects of care. The team helps to raise cultural awareness and diversity perspectives of all VA staff and fellow Veterans through a variety of training efforts and recently expanded their services through an E-consult program that assists other VA healthcare providers with their transgender patients. In addition, SAVAHCS has a very popular weekly Transgender Support Group.

Patient Self-Identification

IT IS CRITICAL FOR PATIENTS TO HAVE THE opportunity to identify themselves as lesbian, gay, bisexual and/or transgender in their health records, if they wish. The Additional Best Practices Checklist asked about four types of options for LGBT patients to self-identify as such in their health records.

First, healthcare organizations that ask patients their marital or relationship status should offer explicit options for them to indicate that they are in a same-sex partnership, particularly if they are in a state where same-sex couples may register with the state and receive healthcare-related rights. Second, transgender patients should be provided explicit options to indicate if their gender identity differs from the sex on their birth certificate, health insurance record and/or identification documents. Third, if patients volunteer their sexual orientation for inclusion in their health records, explicit options should be provided to facilitate this. Fourth, explicit options for recording patients' parents should go beyond "mother" and "father," to be inclusive of same-sex parents and other diverse families.

In all four cases, it should be possible for LGBT status to be recorded readily, via explicit options, rather than only in free-form notes. In addition, employees should be trained to treat LGBT status as confidential, like any other patient health information.

HEI participants' responses to the Checklist questions about LGBT patient self-identification are reported in aggregate below.

✓ **If your organization records patients' marital or relationship status and your organization provides care in a state where unmarried same-sex partners may register their partnership with the state, do your organization's health records offer an explicit option for patients to indicate that they are in a state-registered partnership?**

- 45% Yes
- 42% No, but we are interested in this
- 13% No

✓ **If your organization records patients' marital or relationship status, do your organization's health records offer an explicit option for patients to indicate that they are in a non-state-registered same-sex partnership?**

- 30% Yes
- 45% No, but we are interested in this
- 25% No

✓ **Do your organization's health records offer explicit options for patients to indicate that their current gender identity differs from the sex shown on their birth certificate and/or any identification, insurance, or other documents used in admitting/registration?**

- 13% Yes, this information may be recorded via explicit options
- 42% No, but we are interested in this
- 45% No, this information may only be recorded in free-form notes

✓ **Do your organization's health records offer explicit options for indicating patients' sexual orientation, if they volunteer this information for inclusion in their records?**

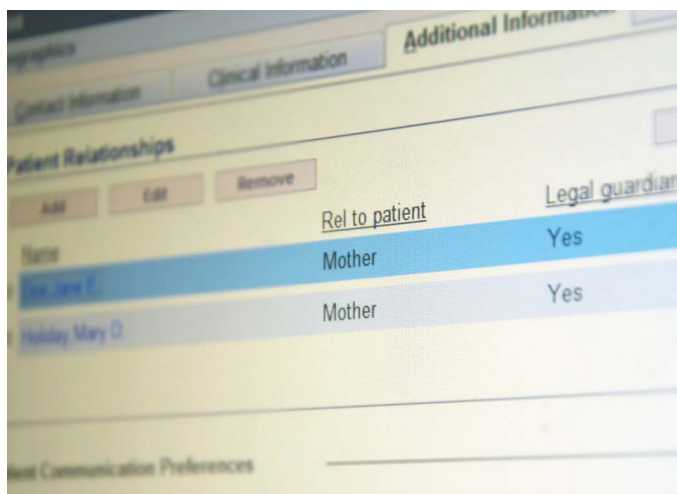

- 15% Yes, this information may be recorded via explicit options
- 39% No, but we are interested in this
- 46% No, this information may only be recorded in free-form notes

✓ **If your organization records information about patients' parents, do your health records offer explicit options for information about patients' parents beyond "mother" and "father" (e.g., "parent/guardian 1, parent/guardian 2, parent/guardian 3") to be inclusive of same-sex parents and other diverse families?**

- 35% Yes
- 51% No, but we are interested in this
- 14% No

✓ **Does your organization provide employees with training explicitly reminding them that LGBT status is confidential patient information?**

- 45% Yes
- 42% No, but we are interested in this
- 13% No

To be more inclusive of same-sex parents and other diverse families, Cincinnati Children's Hospital Medical Center made changes to its electronic registration process in EPIC in 2014. These changes included updating options in the parental/guardian section of the registration system. Instead of entering "Mother/Father/Parent," Cincinnati Children's now has the ability to add the same relationship multiple times (ie. 2 mothers, 2 fathers). This allows multiple adults to be identified as responsible caretakers for admitted children.

To be more welcoming and supportive of their transgender patients, a second, more technically complex change involves a system flag to remind the staff member or provider to use the patient's "preferred" name and pronouns. The system currently allows all users to input the preferred name. In the future, they are planning to include a drop-down box in the gender section to force the registration personnel to input "natal gender" and "current gender". This second system change, as well as education on navigating the change for their registration personnel, is being developed for launch in 2015.

“When we added the Transgender Clinic to the scope of LGBT care provided by Cincinnati Children’s Teen Health Center last year, we recognized that safe, trusting and successful care for our gender variant and transgender patients could not happen in a vacuum. The support fostered throughout the organization has been vital. A key example has been our partnering with Registration Services to broaden the registration forms to include an option to input the patient’s preferred name. By offering fields for things such as preferred name and pronouns, it does not only ensure safety through accurate information, it also creates a holistic trusting, more welcoming experience for the patients and their families. We see a variety of children in our clinic and we are proud that the people and processes in our organization support the care for the diversity of our patients and their families.”

Medical Center

Medical Decision-Making

HEALTHCARE ORGANIZATIONS HAVE SOMETIMES FAILED TO HONOR LGBT PATIENTS'

right to designate the person of their choice, including a same-sex partner, to make medical decisions on their behalf should they become incapacitated, even when legally valid medical decision-making documents have been presented. To prevent these failures, it is critical that healthcare organizations be aware that, in 2011, CMS issued guidance to support enforcement of the right of patients to designate the person of their choice, including a same-sex partner, to make medical decisions on their behalf should they become incapacitated. In addition, employee training related to medical decision-making should affirm that LGBT people have the same medical decision-making rights as other patients.

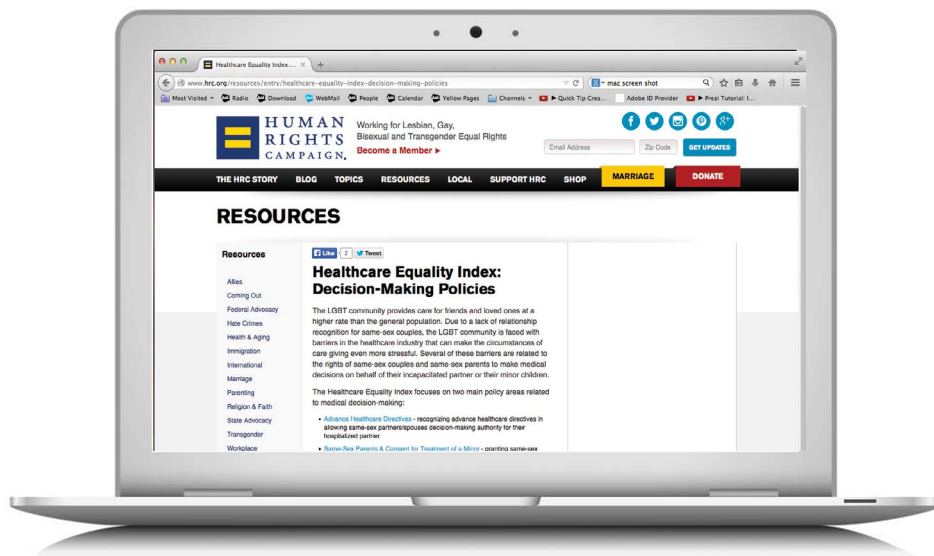

HEI participants' responses to Checklist questions about best practices in medical decision-making are reported in aggregate below. Although 89% indicated that they explicitly inform patients of their right to designate a same-sex partner as medical decision-maker, only 25% include LGBT-specific information in employee training about patient decision-making. But 59% of respondents indicated interest in adding this information to training.

✓ **Does your organization explicitly inform patients of their right to designate a person of their choosing, including a same-sex partner, as medical decision-maker?**

- 89% Yes
- 8% No, but we are interested in this
- 3% No

✓ **If your organization provides employees with training related to medical decision-making, does the training include LGBT-specific information?**

- 25% Yes
- 59% No, but we are interested in this
- 16% No

All LGBT people are strongly encouraged to create advance healthcare directives (e.g., durable powers of attorney, healthcare proxies and living wills). These vital documents allow people to express their healthcare wishes and to designate representatives to make medical decisions on their behalf in the event of incapacitation.

**For more information, visit:
www.hrc.org/decision-making-policies**

“The use of LGBTQ patients in a variety of case scenarios allows us to reinforce our organizational commitment to being respectful, expert, caring partners in health for the neighbors we serve, who represent our diverse communities. This reinforces The Christiana Care Way: creating innovative, effective, affordable systems of care that our neighbors value.”

Timothy D. Rodden
 Director of Pastoral Services
 Christiana Care Health System

Christiana Care Health System is committed to providing staff with the knowledge and skills to effectively advance LGBTQ cultural competency. A strength of their approach is utilizing case scenario-based learning to illustrate specific concepts that resonate with caregivers. In the case of medical decision-making for example, they have a scenario that illustrates how under Delaware law a person can verbally name a power of attorney (POA) for healthcare in the absence of a written POA. The scenario involves a same sex couple which not only teaches providers about the legal principle involved but also allows them to think about the fact that “families” come in all varieties.

Employment Benefits and Policies

THE LGBT EMPLOYEES OF A HEALTHCARE ORGANIZATION PLAY A VITAL ROLE in ensuring LGBT patient-centered care by informally educating co-workers about patient concerns, offering feedback about organizational policies and practices and conveying to the local community the organization's commitment to equity and inclusion. It is critical that LGBT employees, like LGBT patients, receive equal treatment, particularly vis-à-vis health-related benefits and policies. HEI participants' responses to the employment-related Checklist questions are reported in aggregate below and reveal some significant gaps in benefits and policies.

✓ **If your organization offers healthcare benefits to spouses of benefits-eligible employees, do you also offer healthcare benefits to same-sex partners of benefits-eligible employees?**

- 82% Yes
- 8% No, but we are interested in this
- 10% No

✓ **Does your organization have at least one health insurance plan available to all employees that explicitly covers medically necessary healthcare services for transgender people, including gender transition-related treatment?**

- 20% Yes
- 39% No, but we are interested in this
- 41% No

✓ **Has your organization trained and clearly designated at least one employee at an appropriate level of skill, knowledge and influence to serve as an adviser/advocate for transgender employees, particularly those transitioning on the job?**

- 32% Yes
- 47% No, but interested
- 21% No

✓ **If your organization offers any of the “soft benefits” below to employees’ spouses, are they also offered to employees’ same-sex partners?**

Benefit	Yes, offered to partners	No, not offered to partners
Employer-provided life insurance for spouse	74%	26%
FMLA leave or equivalent	70%	30%
Discounts for spouse (e.g., transportation, gym membership)	84%	16%
Bereavement leave in case of spouse's death	86%	14%

✓ **If your organization has conducted an anonymous survey of employees with respect to climate, diversity, or a similar topic, did LGBT employees have an opportunity to identify themselves as such within the survey?**

- 29% Yes
- 50% No, but we are interested in this
- 21% No

✓ **If your organization has conducted an anonymous survey of employees with respect to climate, diversity, or a similar topic, did the survey include one or more questions related to LGBT concerns?**

- 21% Yes
- 57% No, but we are interested in this
- 22% No

✓ **Does your organization have an officially recognized LGBT employee group (i.e., a group that receives funding, meets regularly with organization leadership, is listed on the organization website with contact information and/or advises on LGBT-related policies and practices)?**

- 42% Yes
- 35% No, but we are interested in this
- 23% No

✓ **Since January 1, 2013, has your organization commemorated a “LGBT holiday” (e.g., National Coming Out Day, Transgender Day of Remembrance, National LGBT Health Awareness Week, Pride)?**

- 47% Yes
- 28% No, but we are interested in this
- 25% No

✓ **Are your organization’s hiring/recruitment efforts explicitly LGBT-inclusive?**

- 53% Yes
- 33% No, but we are interested in this
- 14% No

By far the most common form of explicit LGBT inclusion in hiring/recruitment was a statement that the organization does not discriminate on the basis of LGBT status (85% of respondents). Other forms of inclusion were much less common: 22% sent job postings to LGBT groups or publications, 15% had attended an LGBT job fair and 3% have a brochure designed for LGBT applicants.

Benefit highlights guide

2014 plan year

“One of OHSU’s core missions is to be a diverse organization that nurtures a community of inclusion. One important step toward enhancing the climate of inclusion is ensuring access to medically necessary care for transgender employees and their dependents.”

Joseph Robertson, M.D., M.B.A.

President

Oregon Health and Science University

Oregon Health and Science University is committed to improving health and well-being for all Oregonians. In 2012, OHSU reinforced that commitment when it became the largest employer in Oregon to extend health insurance coverage for care related to gender transition.

The American Medical Association designates transition-related healthcare as medically necessary. Several other physicians’ organizations, including the American Psychiatric Association, the American College of Obstetricians and Gynecologists and the National Association of Social Workers and OHSU experts agree that improved care for the transgender community is needed. OHSU decided to extend services based on expert opinions and its own internal review.

Community Engagement

HEALTHCARE ORGANIZATIONS CAN BEST EXTEND A WELCOME TO LGBT PEOPLE in their service area by reaching out to them via regular community engagement initiatives like those recommended in the Additional Best Practices Checklist. In addition, HEI Equality Leaders can publicize the fact that they meet the Core Four criteria for foundational LGBT equity and inclusion.

HEI participants' responses to the Checklist questions about community engagement are reported in aggregate below.

✓ **Has your organization conducted a formal needs assessment or gap analysis vis-à-vis LGBT services and programs with local LGBT individuals or groups?**

- 20% Yes
- 62% No, but we are interested in this
- 18% No

✓ **Since July 1, 2013, has your organization participated in or supported one or more LGBT-related events or initiatives in its service area?**

- 51% Yes
- 35% No, but we are interested in this
- 14% No

✓ **Does your organization have a representative of an LGBT organization or an openly LGBT person serving on a governing or community advisory board?**

- 54% Yes
- 32% No, but we are interested in this
- 14% No

✓ **Since July 1, 2013, has your organization held a meeting with one or more representatives of an LGBT organization to discuss LGBT-related concerns?**

- 57% Yes
- 28% No, but we are interested in this
- 15% No

✓ **Does your organization conduct or substantially support LGBT health-related research?**

- 25% Yes
- 52% No, but we are interested in this
- 23% No

The vast majority of participants displayed their support for the LGBT community through participating in and sponsoring local pride events as illustrated in the adjoining photos. Facilities also put on LGBT health fairs, held educational talks for healthcare providers, participated in Transgender Day of Remembrance and actively engaged with LGBT patients, employees and local communities in a diverse variety of events and programs, such as these:

Advocate Illinois Masonic Medical Center hosted a symposium entitled "Current Legal & Health Topics for the LGBT Community: What Does Marriage Equality Mean for my Health Care?" to ensure LGBT patients "learn what you need to know about your health care rights and responsibilities in light of Illinois marriage equality!"

Denver Health Medical Center held an LGBT Health Fair

Froedtert Health and University of Wisconsin Hospital & Clinics sponsored the 1st Annual LGBTPM Symposium: An Introduction to Transgender Healthcare

UC Davis Medical Center hosted an event called "Come Out for Your Health" to celebrate "our diversity and our commitment to individualized, respectful care!"

VA Captain James A. Lovell Federal Health Care Center, VA Edward Hines Jr. Hospital and VA Jesse Brown Medical Center all sponsored a second annual "Operation: Do Ask, Do Tell" symposium for LGBT Veterans, Active Duty Service Members, families, friends and healthcare providers focusing on health needs and resources.

The HCA West Florida Pinellas County Hospitals are proud to sponsor the 2014 St. Pete PRIDE Celebration.

Parade is Saturday, June 28th at Sundown
Begins 3rd Ave. N. at 32nd St. N. & Ends at Central Ave. at 21st St.

Street Fest is Sunday, June 29th 11am to 6pm
Visit our Health Zone while you're there! Central Ave., between 22nd St. and 27th St.

Health Systems Leading the Way

The majority of hospitals in the United States today are part of a health system or network. The Healthcare Equality Index has always had strong participation from hospitals in a variety of health systems and networks and an overwhelming majority of the hospitals in this year's report are part of a health system or network. This section profiles three of the many health systems represented in this year's HEI.

Kaiser Permanente

KAISER PERMANENTE IS RECOGNIZED AS ONE OF AMERICA'S LEADING HEALTHCARE providers and not-for-profit health plans, serving approximately 9.5 million members in eight states and the District of Columbia with 38 hospitals in California, Hawaii and Oregon. In 2010, Kaiser Permanente was the first healthcare provider and hospital system HRC designated as a Leader in LGBT Healthcare Equality. Over the past five years, Kaiser Permanente has consistently achieved leader status for all of its hospitals and once again, in 2014, all 38 medical centers are HEI Leaders in Healthcare Equality.

Kaiser Permanente's commitment to LGBT patient-centered care dates far past its participation in the HEI. Over 25 years ago, Kaiser Permanente organized the HIV Advisory Board of Kaiser Permanente San Francisco to improve the delivery of HIV care. Since then, Kaiser Permanente has continued to model excellence in LGBT culturally competent care and has grown to establish multiple LGBT specific programs and services. In 1999, with the support of staff, clinicians and the community, Kaiser Permanente's Institute for Culturally Competent Care developed a culturally competent care handbook that helps educate providers and staff on equitable and high-quality care for LGBT patients. The handbook is also shared with healthcare-related community organizations.

In 2012, Kaiser Permanente established a Center of Excellence in Culturally Competent Care for LGBTI Health Equity, to act as an innovation site in piloting culturally competent practices and as a resource to the organization in promoting health equity and eliminating health disparities in LGBTI communities. Additionally, Kaiser Permanente holds an LGBTI Health Care Symposium, first organized in 2012, to build knowledge and awareness for physicians, leaders and employees caring for LGBTI patient needs.

In 2013, Kaiser Permanente responded to the needs of transgender patients by offering transgender inclusive care as an add-on covered benefit. Kaiser Permanente now further serves transgender patients through services such as counseling, hormone therapy, gender transition surgery and multi-specialty clinics.

"Kaiser Permanente's participation and leadership status in the HRC Healthcare Equality Index is one way we demonstrate our commitment to diversity and inclusion and our vision of improving the health of our members and the communities we serve, inclusive of lesbian, gay, bisexual, transgender and intersex populations," said Ronald L. Copeland, MD, FACS, Kaiser Permanente's Senior Vice President and Chief Diversity & Inclusion Officer. "We are committed to our continuous journey of learning from the community and partners like the HRC to deliver culturally responsive and respectful care to promote LGBTI health equity."

In 2012, Kaiser Permanente established a Center of Excellence in Culturally Competent Care for LGBTI Health Equity, to act as an innovation site in piloting culturally competent practices and as a resource to the organization in promoting health equity and eliminating health disparities in LGBTI communities.

Bon Secours Health System

BON SECOURS HEALTH SYSTEM IS A \$3.4 BILLION NOT-FOR-PROFIT CATHOLIC HEALTH system sponsored by Bon Secours Ministries, with hospitals in Virginia, Kentucky, South Carolina, Maryland and New York. In 2012, Bon Secours became the first Catholic health system designated as a Leader in LGBT Healthcare Equality and has since maintained Leader status for its 14 majority owned acute care hospitals.

Bon Secours finds that the values of equity and inclusion in the HEI go hand-in-hand with its Catholic affiliation. Gloria Goins, chief diversity officer for Bon Secours Health System, explains that: "Bon Secours is a health system that proudly operates on core values to ensure that we provide 'good help to those in need.' Two of those values are 'respect' and 'justice.' 'Respect' is our commitment to treat all people well, based on our belief that each person has equal dignity and is made in the image and likeness of God. 'Justice' is the value that supports and protects the rights of all people and promotes the right to have needs met with human dignity."

By participating in the HEI, Bon Secours hopes that they are helping to eliminate obstacles that LGBT patients and their families and loved ones may encounter in obtaining care. They want all patients to feel that by coming to a Bon Secours facility they will receive compassionate and quality care in a manner that best meets their individual needs and without fear of discrimination or disrespect. Darren T. Binder, vice president and deputy general counsel and a member of the Bon Secours Health System Diversity Council, notes that "Bon Secours is aware that members of the LGBT community historically have faced barriers in obtaining access to quality healthcare services in welcoming environments resulting in disparities in healthcare outcomes. That is why we are very proud that each one of our hospitals has received Leader in LGBT Healthcare Equality status for the third year in a row."

In continuing to provide the best possible care for LGBT patients, Binder expands upon the network's ongoing efforts, noting that "our current focus is ensuring that we continue to educate our employees on our inclusive policies. We recognize, particularly as a large health system, that we will always have more learning to do to increase awareness of and improve our processes with respect to, the needs of the LGBT community. That is why we value and appreciate the annual training that is offered by the Human Rights Campaign Foundation."

This year, SSM Health Care became the second Catholic health system to participate in the HEI and attain the status of LGBT Leader in Healthcare Equality for the majority of their hospitals. SSM Health Care is a Catholic, not-for-profit health system serving the comprehensive health needs of communities in four states across the Midwest through one of the largest integrated delivery systems in the nation. SSM has care delivery sites in Missouri, Oklahoma, Illinois and Wisconsin, including 19 acute care hospitals.

PROMO, Missouri's statewide LGBT advocacy organization, along with SAGE of Metro St. Louis partnered with SSM Health Care on the HEI initiative. Part of this process included training on LGBT Patient-Centered Care provided to over 630 SSM healthcare providers and administrators.

Cone Health

CONE HEALTH IS A NOT-FOR-PROFIT NETWORK OF HEALTHCARE PROVIDERS SERVING people in six counties in North Carolina. As one of the region's largest and most comprehensive health networks, Cone Health has more than 100 locations, including six hospitals, three medical centers, four urgent care centers, 95 physician practice sites and multiple centers of excellence.

Cone Health's tagline – "The Network for Exceptional Care" – highlights their commitment to excellence, which is shared by their more than 10,000 professionals, 1,300 physicians and 1,200 volunteers. Cone Health's commitment to exceptional care includes caring for their LGBT patients and employees. This year Cone Health's Inclusion Council wanted to focus on addressing the needs of their LGBT patients and employees.

The Inclusion Council reached out to The Human Rights Campaign Foundation when they realized they last took the HEI survey in 2012. At that time, Cone Health did not meet any of the Core Four Criteria. The Inclusion Council committed to taking the survey this year at all six hospitals with the goal of meeting the Core Four Criteria. They reached out to leaders across the network to participate in HRC's free training.

The HEI survey prompted Cone Health to examine and update as necessary their patient nondiscrimination and visitation as well employment policies, the information on their website and their Patients' Bill of Rights to ensure that the health system was treating their LGBT patients and employees with dignity and respect. Chief Medical Officer at Cone Health, Mary Jo Cagle, MD, states, "Participating in the survey raised Cone's awareness about the role that caregivers play in allaying fears of their LGBT patients in order to provide the highest quality of care."

"We are extremely proud that all six of Cone Health's hospitals have been designated as Leaders in LGBT Healthcare Equality in 2014," said Paul A. Jeffrey, President, Wesley Long Hospital and Chief Inclusion Officer, Cone Health. "Cone is honored by the designation and understands that we have a great responsibility to the LGBT community to continue on this journey" he continued. As the next phase of this continual learning process, this fall, Cone Health's Inclusion Council will provide an e-learning tool for all employees that will address LGBT patient-centered, exceptional care.

The Inclusion Council committed to taking the survey this year at all six hospitals with the goal of meeting the Core Four Criteria. They reached out to leaders across the network to participate in HRC's free training.

Appendix A:

How We Obtained the Information

The Healthcare Equality Index Survey

In order for a facility to actively participate in the Healthcare Equality Index, it must complete and submit an online survey to the HRC Foundation for review. The primary source of information for the responses shown and the data reported in the Healthcare Equality Index report is aggregated from these surveys. Invitations for the HEI 2014 survey were mailed in February 2014 with a survey submission deadline of June 30, 2014.

The HEI 2014 survey includes criteria to assess facilities' LGBT patient-centered care that incorporates CMS and Joint Commission (TJC) requirements and recommendations. The survey aims to highlight and encourage use of the best practices and policies for LGBT-inclusive care by including links to sample policies, TJC and CMS requirements and other guidance, via the HRC Foundation website. Throughout the process, HRC Foundation Health and Aging Program staff provided additional assistance and advice and once the survey was submitted, reviewed documentation for appropriate language and consistency with survey answers. Through this review process completed with HRCF staff, healthcare facilities were able to address any deficiencies found in the preliminary review of their survey and submit the required additional information necessary to meet the Core Four Leader criteria.

507 of the facilities listed in this year's HEI actively completed and submitted the 2014 survey, each with the goal of being a "Leader in LGBT Healthcare Equality." Another 357 facilities are listed based on survey responses from 2012 or 2013.

Non-Respondent Researched Facilities

New to the HEI 2014, facilities from across the U.S. were added to the HEI report as a service to the LGBT community. 640 hospital facilities that had not previously participated in the HEI survey were chosen to be included in the report based on their size, being either a part of the **50 Largest hospitals in the U.S.**, a part of the **largest hospitals in each of the 50 states, District of Columbia and Puerto Rico**, or a part of the **largest hospitals within a 25 mile radius of the 50 largest LGBT metropolitan areas**.

HRCF staff researched the patient non-discrimination, visitation and employment non-discrimination policies for each of these hospitals in January 2014. Hospital facilities' public websites were searched for these policies using search terms such as "non-discrimination," "visitation," "EEO," "Bill of Rights," "sexual orientation" and "gender identity." We went beyond the websites' menu structure and search

tool and used advanced search techniques to find these and other relevant terms. Our policy in our searches was to take the approach of an internet savvy potential patient, visitor or applicant attempting to learn whether a hospital had:

- An LGBT-inclusive patient non-discrimination policy
- An equal visitation policy
- An LGBT-inclusive employment policy

In an effort to ensure that these results were correct and to provide ample opportunity for facilities to update their results, HRCF Health and Aging Program staff also researched a minimum of two contacts at each hospital. This included finding email and mailing information for the CEO and at least one other C-Suite executive, preferably executives responsible for Human Resources, Diversity, Marketing, Patient Care, Compliance and Nursing.

With these results, we reached out to each of these hospitals multiple times throughout the survey period with our findings and invited them to actively participate in the HEI 2014 or to submit documentation to us regarding any policies that we could not find. We sent a letter to the CEO of each hospital in March of 2014 and sent a total of six emails with our findings to CEOs and the other contacts we had at each hospital between February and June 30, 2014.

By February 2014 we had researched just over 800 hospitals for inclusion in the HEI 2014 report. From March through June, approximately 144 hospitals submitted information to us about one or more of their policies, which was updated if appropriate. In order to update a policy a hospital had to send us a copy of the policy, a link to the updated policy on their website or at a minimum, a quote from their policy with the relevant language. 48 additional hospitals chose to actively participate in the 2014 survey and 34 of those facilities became Leaders in LGBT Healthcare Equality.

In August 2014, we reviewed our findings again to ensure they were as up-to-date and as accurate as possible. We found that an additional 81 hospitals had updated one or more of their policies and had placed these updates on their public websites. Also in August, facilities that had one or no contacts were removed from the HEI report as we felt that they had not had ample opportunity to review and update their results.

We know that many of the hospitals in this research group updated their policies or put them on their website as the result of this process. We are pleased to have been able to help make hospitals aware of these critical policies and the importance of communicating these policies to the public and their potential patients, visitors and job applicants.

Recommendations:

This research effort revealed to us two important things:

Many hospitals have not adopted LGBT inclusive patient non-discrimination and equal visitation policies to ensure compliance with The Joint Commission and CMS standards. While The Joint Commission standard does not require the adoption of a written non-discrimination policy, it is recommended as one of the clearest ways to demonstrate compliance.

Many hospitals do not include these important policies on their hospital websites. Today's healthcare consumers are used to finding information on the internet so hospitals would be wise to place their Patients' Bill of Rights or patient non-discrimination policy as well as their equal visitation policy and employment non-discrimination policy on their websites where they are easily accessible to LGBT patients and potential applicants.

Based on this research process, we would recommend the following to hospitals and other healthcare facilities:

1. **If not already done, update your patient non-discrimination policy to include both "sexual orientation" and "gender identity" so that your hospital is clearly delineating its compliance with The Joint Commission standards.**
2. **If not already done, update your visitation policy to ensure equal visitation and non-discrimination to meet The Joint Commission and CMS standards.**
3. **Update your employment non-discrimination policy to include both "sexual orientation" and "gender identity" as recommended in The Joint Commission's LGBT Field Guide.**
4. **Communicate these policies on the hospital's website! Give people the opportunity to learn about your policies before they face a health crisis and have to be admitted to the hospital. Do not leave them wondering if they will face discrimination at your hospital.**
 - a. Include your patient non-discrimination policy and your visitation policy in your Patients' Bill of Rights and make it easy to find on your website.
 - b. In addition, include your equal visitation policy on your website with the other information about visitation, like visiting hours.
 - c. Include your employment non-discrimination policy prominently on your careers page.

These steps will send a clear and welcoming message to the LGBT community.

Appendix B:

HEI 2014 Core Four Leader Criteria Responses by State

Healthcare Equality Index CORE FOUR Leader Criteria

- 1a** Patient non-discrimination policy (or patients' bill of rights) is fully LGBT inclusive and includes both the terms "sexual orientation" and "gender identity"
- 1b** LGBT-inclusive patient non-discrimination policy is communicated to patients in at least two readily accessible ways
- 2a** Visitation policy explicitly grants equal visitation to LGBT patients and visitors
- 2b** Equal visitation policy is communicated to patients and visitors in at least two readily accessible ways
- 3** Employment non-discrimination policy (or equal employment opportunity policy) is fully LGBT inclusive and includes both the terms "sexual orientation" and "gender identity"
- 4** HEI approved training in LGBT patient-centered care was provided to key staff members in 2014

KEY

Facilities are listed in alphabetical order by their city for each state.

Listings in **Bold Blue Type** are the **2014 HEI Survey Participants**. Those facilities in **Bold Blue Type** with a **■** preceding their name are the facilities that met all Core Four criteria and are awarded "Leader in LGBT Healthcare Equality" status (see page 16 for more information and a separate listing of this year's leaders).

Listings in Regular Type are facilities that actively participated in HEI 2012 or HEI 2013, but not HEI 2014. Their previous responses are shown.

Listings in Grey Type are the unofficial ratings of 640 "non-respondent" hospitals that were researched by the HRC Foundation (see page 48 for a description of our research methodology). These ratings are based on the information publicly available on the hospital's website as well as the actual policies of the hospitals that were provided to us by approximately 144 of the researched hospitals.

● **Yes:** Survey respondent facilities are shown as meeting a criterion only if they have submitted appropriate documentation. Non-respondent facilities are shown as meeting a criterion if we found a policy statement on their website or if they submitted their policy to us.

● **No/Not Found:** Survey respondent facilities are shown as No if their policy is not fully LGBT-inclusive or they did not meet the communication or training requirements. Non-respondent facilities are shown as No/Not Found if the policy we found on their website or that they sent to us is not fully LGBT inclusive OR if we could not find a policy at all.

How to Participate in the HEI 2015

THE HEI IS AN ONLINE SURVEY THAT has been administered annually since 2007 by the Human Rights Campaign Foundation. The survey period opens in the first quarter of the year and ends approximately four months later.

Any healthcare facility with at least 100 fulltime employees may participate in the HEI 2015 by emailing hei@hrc.org or visiting hrc.org/hei to request a unique login, which allows the survey to be viewed without obligation. Participants in the HEI 2014 or previous surveys can use their existing login to access the HEI 2015, as soon as they are notified that the HEI 2015 survey period has opened.

Healthcare organizations that actively participate in the HEI are assisted throughout the survey completion process by HRC staff. Staff members answer questions, carefully review each survey submitted and then provide each participating organization with a comprehensive summary of its HEI responses.

Additional healthcare facilities in key locations will be included in the HEI 2015, even if they do not actively participate, using similar research methodologies as this year to assess their patient, visitation and employment non-discrimination policies. Core Four responses of HEI 2013 and HEI 2014 participants that do not actively participate in the HEI 2015 will also be included in the HEI 2015 annual report, with their most recent year of participation noted.

The HEI has two sections, the Core Four Leader Criteria and the Additional Best Practices Checklist. Responses to both sections are published in the HEI report, by organization name and in aggregate, respectively.

The **Core Four Leader Criteria** are foundational criteria for LGBT patient-centered care that incorporate CMS and Joint Commission requirements. Responses to questions in this section are listed by organization in the HEI annual report and determine whether participants are designated as "Leaders in LGBT Healthcare Equality." (HEI 2014 Leaders are featured from page 16.)

The **Additional Best Practices Checklist** is designed to familiarize HEI participants with other expert recommendations for LGBT patient-centered care, to help identify and remedy possible gaps. Responses to these questions are not shown by organization in the HEI report and do not affect Leader status. Instead, they are returned to HEI respondents in a unique, customized document that can be used for benchmarking, needs assessment and strategic planning.

For more information about participating in the HEI 2015, visit www.hrc.org/hei or email hei@hrc.org.
